

Assignment is fairly straightforward, using the code provided in the lab you can basically complete this with a few alterations; the only part that posed a challenge was the fact a drop down menu was involved.

```
Select selectGender = new Select(driver.findElement(By.name("selectGender")));  
    selectGender.selectByVisibleText("Male");
```

Gets the job done though.

JUnit test(s) run too quick to screenshot but you can see both cases are passing below.

Learned a lot with this one and I know test based development is the way to go so I really enjoyed this assignment.
